Breeding elite seedstock

...is always a challenge.

Every year we strive to improve and produce the right kind that combine maternal strength, sound structure, and true muscle and performance to meet the needs of both seedstock producers and commercial cattlemen. Contact us for your next Red Angus herd sire or replacement female carrying the Shoal Creek Brand!

PRESIDENT'S WELCOME

It is certainly an honor to serve as the President of the Missouri Red Angus Association for 2020/2021 and on behalf of all MORAA member. I, along with the Missouri Red Angus Association's Board of Directors will be leading all aspects of promoting Red Angus throughout the state for our members.

2020 will certainly go down as one to remember. While COVID-19, impeachment, protests and riots dominated the daily news feeds, there are many positive things that continue to be happening throughout Missouri and the United States regarding the Red Angus breed in general. The Red Angus female remains the most sought-after beef animal in the country and Red Angus bull sales continue to gain momentum. Obviously, there are different ways to own these great females, you can "buy" them or you can "build" them by using a registered Red Angus bull.

The entire state of Missouri is situated within the fescue belt and since fescue was introduced into our region, Missourians have built their herds using genetics that have proven to be "fescue tolerant" livestock. This is one of the great advantages that the vast majority of our members have over breeders from outside the fescue belt. "Bred In Fescue Tolerance"

In closing, I encourage you to purchase Red Angus genetics that have a proven track record of performance from any the members listed inside this directory. Furthermore, if you have any interest in promoting the Red Angus breed within our state, I not only invite you but would also strongly encourage you to join our group.

Regards,

DAN LACY, PRESIDENT

Missouri Red Angus Association

WWW.MISSOURIREDANGUS.COM

POWER GENETICS

that Works

We strongly believe in utilizing genetics that deliver profit to the bottom line. We take a balanced approach in our breeding program, always keeping the Red Angus breed strengths at the forefront of our efforts. We strive for a combination of low birth to high growth, fleshing ability, carcass quality and of course, docility. We wrap these important traits in a phenotypically pleasing package that is both functional and efficient.

Turning the Cow Herd **Red**

Why Red Angus.....

- Red in color with bronze pigmented skin
- Naturally polled
- Gentle natured and easy to work
- Improved heat tolerance
- More resistant to pinkeye & sunburned udders than non-pigmented skinned animals.
- Improved insect resistance
- High quality carcass with excellent intra muscular marbling
- Red crossed red always breeds true.
- Red Angus carry no diluter genes and therefore avoids the grays that result when crossbreeding with blacks.

Red Angus Females.....

- Have strong maternal instincts
- Are highly fertile
- Provide excellent milk production
- Reach puberty at a young age
- Are renowned for their longevity
- Are the most sought after female in the industry today

Red Angus Bulls.....

- Provides calving ease without sacrificing performance
- Large scrotal sizes with excellent semen production
- Provide the most cost effective way to assemble a Red Angus Cow Herd
- Are excellent choices for crossbreeding

Red Angus Value Added Programs.....

- Premium Red Baldy Heifer Program™(PRB)
 - Premium Red Baldy tagging program is designed to take advantage of hybrid vigor by maximizing the best traits of both Red Angus and Hereford, providing commercial producers with premium replacement females
- American Red™
 - The Red Angus Association of America and Santa Gertrudis Breeders International have collaborated to provide a unique blend of maternal traits, adaptability, growth and marbling – all packaged with a heat-tolerant, red hided animal.
- RAAA Feeder Calf Certification Program (FCCP)
 - The USDA process-verified program is the industry's largest and longest running program, verifying genetics, age and source for over two decades.
- Allied Access Feeder Calf Program (AA)
 - Allied Access delivers Age & Source Verification (ASV) without the Genetic restrictions of its predecessor, the FCCP.

Why Missouri Red Angus?

An old cattleman saying is.....

"You can move cattle North & West, but you can't move cattle South & East."

Many of us have experienced the problems that can be associated with importing newly purchased cattle into our environment. What we've seen is a significant percentage of cattle that have not been raised on fescue will struggle once imported into the fescue belt & forced to perform in our environment,....."on the grass we love to hate". Fescue toxicity often referred to as "Summer Slump". Cattle experiencing fescue toxicosis may exhibit rough hair coats, heat stress, suppressed appetite, poor growth and reduced calving rates. Some animals eventually overcome this issue but many will not and will eventually be culled from the herd.

While there are several tools offered to combat the problems such as mineral supplements, DNA testing, etc., their success rate has limited at best. The USDA estimates Fescue toxicosis costs the U.S. beef industry an estimated \$600 million to \$1 billion annually in lost revenue because of reduced reproductive and growth rates in cattle herds.

Research on the subject has been done for years & in 2016, University of Missouri Extension geneticist, Dr. Jared Decker won a \$2 million grant from the USDA to find genetic differences among regions. Decker & his colleagues are utilizing DNA markers to study the interactions between cattle DNA & the environment. The study is focused on DNA, hair shedding & tall fescue forage. When complete, the data will be used to design region-specific EPD's.

The entire state of Missouri is situated within the fescue belt and since fescue was introduced into our region, Missourians have built their herds using genetics that have **proven** to be "fescue tolerant" livestock. This is one of the great advantages that the vast majority of our members have over breeders from outside the fescue belt..... **"Bred In Fescue Tolerance"**

United States Fescue Belt

FEEDER CALF CERTIFICATION PROGRAM (FCCP)

The FCCP “Yellow Tag” is recognized as the symbol of guaranteed “Angus” genetics & a trusted source for both feeders & packers filling “Angus” product lines.

Qualifications:

- Traceability to at Least 50% Red Angus bloodlines
- Group Age Verified
- Source Verified to the Ranch of Origin
- Source Verification for the Bovine Export Verification Program for China

PREMIUM RED BALDY PROGRAM

Premium Red Baldy females will rise to the challenges of producing more beef sustainably & profitably, without sacrificing quality. The Premium Red Baldy program has the ideal balance of maternal & carcass traits, which will yield cattle poised to increase the profitability of the commercial producer.

Qualifications:

- Heifer Only Program
- Females must be sired by bulls in the top 50% of the breed for Baldy Maternal Index (BMI\$) or Herdbuilder Index (HB).
- Targeted breed percentages will range from 25%-75% for both breeds, with the balance being the alternate breed.
- Females must be red-bodied with either bald or brockle face.

For more FCCP & Premium Red Baldy details visit redangus.org

PREMIUM RED BALDY PROGRAM

Take advantage of hybrid vigor by maximizing the best traits of both Red Angus and Hereford, producing premium replacements.

Premium Red Baldy

- Females only
- Red Angus or Hereford sired
- Top 50% of breed for HB or BMIS Indexes
- Red bodied with bald or brockle face

No enrollment fee, 99¢/tag
Not a USDA Process-Verified Program

GENETICS

The program helps producers access genetically verified females that have the best combination of longevity, fertility and adaptability.

The Premium Red Baldy program has the ideal balance of maternal and carcass traits which will yield cattle poised to increase the profitability of the commercial producer.

Contact Chessie Mitchell,
RAAA tag program coordinator,
at tags@redangus.org, to enroll.

"Skinny Dipping at Veto" by Carl Gleghorn

WITH OVER 25 YEARS IN THE BREED, WE ARE BREEDING FOR BALANCE.

At Veto Valley Farms, we focus on breeding for balance, because we understand that each trait has a long-lasting effect on our cowherd & our customers' profitability, whether it's calving ease & growth, maternal & carcass, phenotype & EPDs. We are built on a long history in the Red Angus breed, dating back to the first female purchase from Whitley Red Angus in 1992. We are based on 1,100 owned and 600 leased acres in southern middle Tennessee near Fayetteville and north central Alabama near Veto/Elkmont. Our 225-head cowherd includes purebred Red Angus & a SimAngus recipient herd, whose progeny are available by private treaty & consignment/online sales. Bulls are offered through Ludvigson Stock Farms - Ozark, MO sales. Contact us to see how Veto Valley can work for you!

How the Red Color Works

B= dominant black gene
BB= homozygous black

b= recessive red gene
Bb= heterozygous black, red carrier

Red x Red

	b	b
b	bb	bb
b	bb	bb

100% of progeny will be red (even if any red parent had a black parent)

Black, Red-Carrier x Red

	b	b
B	Bb	Bb
b	bb	bb

50% of progeny will be black. Reds will be pure red & blacks will be all black red-carriers.

Homozygous Black x Red

	b	b
B	Bb	Bb
B	Bb	Bb

100% of progeny will be black, red carriers.

Black, Red-Carrier x Black, Red-Carrier

	B	b
B	BB	Bb
b	Bb	bb

75% of the progeny will be black & 25% will be red. Of the blacks, 2/3 (50% of the total progeny) will be red carriers & 1/3 (25% of total progeny) will be non-red carriers.

Note: A red calf, even if from black parents, is pure red (bb). It has NO black genes.

The red color of Red Angus has three distinct advantages:

- 1) Red is the most populous color of cattle breeds world wide. Red Angus provides a continuity and uniformity of color to any crossbreeding system.
- 2) Red is more heat tolerant than black and the bronze pigmentation gives a great resistance to cancer eye and sun burned udders. The majority of the world's cattle are in areas that need heat tolerance, so the red color is a definite advantage.
- 3) Red crossed red always breeds true. Red Angus carry no diluter genes and thus avoids the grays that result when crossbreeding with blacks.

MISSOURI RED ANGUS ASSOCIATION REGIONS

The map above outlines the regions of our state so you can locate the general area where a producer is located based on the region listed with their contact information.

Contact us for more details:
(417) 736-2125

Andras **Bando** B068

#1748001

Proven calving-ease herd sire with a flawless EPD profile. Great on his feet, slick haired and his daughters have impeccable udders.

Herd Builder	Grid Master	CED	BW	WW	YW	Milk	ME	HPG	CEM	STAY	MARB	YG	CW	REA	FAT
171	50	15	-0.8	63	108	24	0	12	9	14	0.64	0.10	28	0.12	0.02

Lacy **Centerpoint** 448 025F

#3939105

Easy-fleshing and slick haired, CENTERPOINT balances thickness, masculinity, soundness, and style. An excellent disposition with an impressive 756 lb. adjusted weaning weight.

Herd Builder	Grid Master	CED	BW	WW	YW	Milk	ME	HPG	CEM	STAY	MARB	YG	CW	REA	FAT
186	48	15	0.4	66	105	20	1	10	9	17	0.41	0.11	24	0.11	0.03

Andras **Intrigue** F164

#4109770

A real powerhouse, INTRIGUE offers an outcross pedigree, a balanced EPD profile and flawless structural design.

Herd Builder	Grid Master	CED	BW	WW	YW	Milk	ME	HPG	CEM	STAY	MARB	YG	CW	REA	FAT
158	48	13	-0.8	68	109	24	-4	10	9	14	0.49	0.19	30	0.13	0.06

Save the Date for our
34th Annual Bull & Female Sale
March 27, 2021

Profit begins with reproduction and maternal strength.

We've built our herd around breeding females that excel in maternal strength. If you're looking for replacement females that offer high performance from a fescue environment, we raise the kind that will work for you and build profit into your program!

- ★ DNA tested by AgBotanica Fescue Fungus Tolerance 5 out of 5 stars
- ★ 50 out of 50 Tolerance Points Test
- ★ 907 actual weaning weight off a 1,200 lb. cow (75.6% of dam weight) NO CREEP FEED!
- ★ #1 weaning weight of all my registered or commercial calves by over 200 lbs. and #2 weaning weight was a 4-star heifer

You can hope they are fescue fungus tolerant or you can start with a tested leader!

End of the Road Red Angus

Roy Freeman: (417) 770-2847 | 11515 SE 777 PVT Rd. • Collins, MO 64738

A crossbreeding program for the commercial beef producer.

Qualifications

To qualify for American Red, steers and heifers must be sired by registered Red Angus bulls averaging in the top 50% of the breed for HerdBuilder or registered Santa Gertrudis bulls average in the top half of the breed for maternal and growth traits.

Breed percentages on qualified cattle will range from 25% to 75% Red Angus and 25%-75% Santa Gertrudis. Most qualified cattle will be red.

Dams of qualifiable calves must contain at least 50% of the reciprocal breed.

Benefits

American Red is a tagging program designed to provide the beef industry with a unique blend of maternal traits, adaptability, growth and marbling.

These traits, packaged with a heat-tolerance and a red hide, have huge potential to impact heat-challenged areas where cattle are produced.

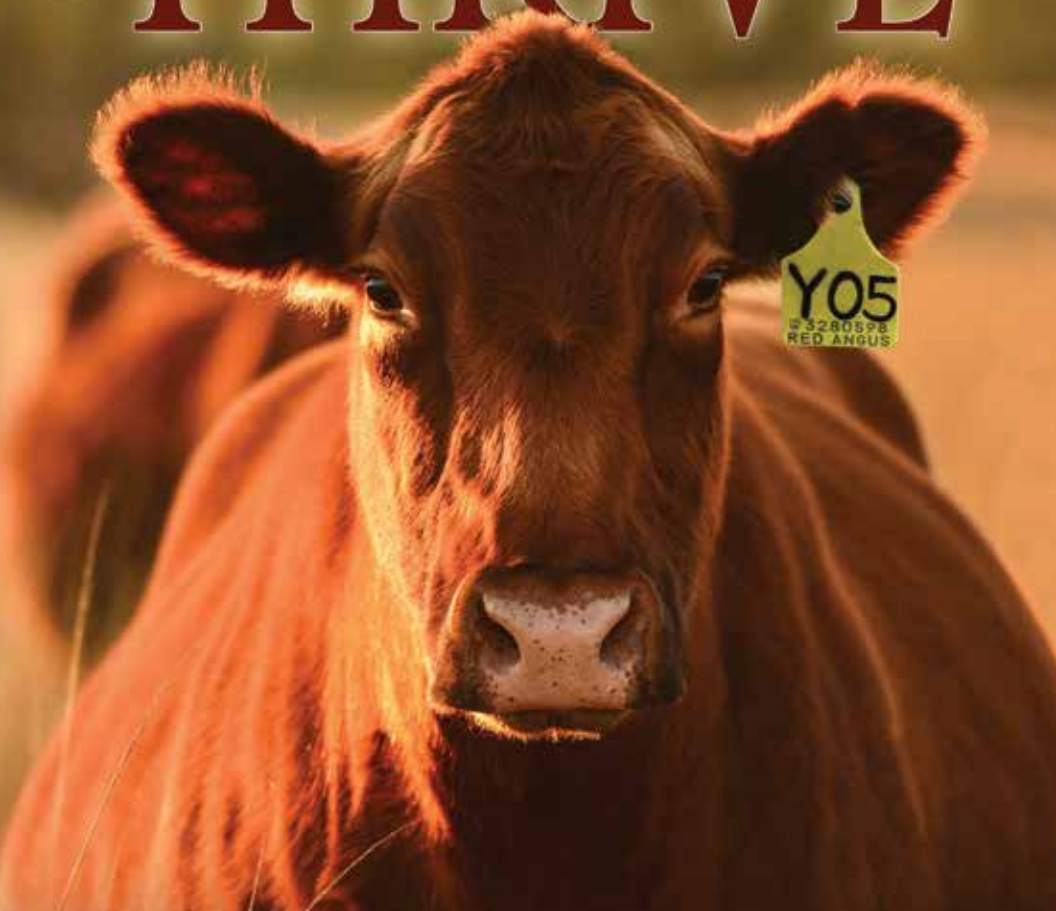

American Red emphasizes the value of increased longevity, fertility and efficiency.

Please contact Chessie Mitchell, RAAA tag program coordinator, at tags@redangus.org, to enroll.

RED ANGUS
RANCH TESTED. RANCHER TRUSTED.

THRIVE

**Position your ranch to thrive with
the industry's most-favored female.**

Ranch Tested. Rancher Trusted.

Red Angus

RedAngus.org

An independent university study compared eight years of Superior Livestock Auction data, revealing Red Angus-sired heifers commanded up to \$11/cwt more than females of all other breed types.
